Rob Carr's Tunnel Construction

Microtunnelling: Rob Carr Pty Ltd primarily utilise the Iseki TCC and TCS range of earth pressure balanced tunnel boring machines (using the slurry spoil removal method). The machine also possesses an independently driven cone crusher assembly which utilises a patented epicyclical motion during the

tunnel excavation.

Guided auger Boring & pilot soil displacement Method:

It is a highly efficient method, low cost trenchless pipe installation systems commonly used to install pipe diameters of up to 450mm.
